PSE Statement on Trading Halt

The market halt implemented at the Philippine Stock Exchange at 10:29 a.m. today, April 8, 2016, arose due to a third-party communication line disconnection within the Exchange system's network. The Exchange determined the issue to be strictly confined to the communication line systems.

Trading immediately resumed at 11:10 a.m. once connection was firmly established and the appropriate system checks and end-user operational procedures were completed.

This incident is not related to the trading terminal issue encountered in August 2015.

The Exchange will conduct further assessment on the issue encountered in today's trading to prevent similar incidents from happening in the future.
