Index Performance

Index Calculation

$$PSE\ DivY\ Index_t = \frac{\sum_{i=1}^n (P_{it} \times S_{it} \times F_{it} \times DY_{it} \times C_{it})}{b} \times PSE\ DivY\ Index_{t-1}$$

$$i = 1, 2, 3, \dots, n$$

Where:

n =	Number of constituents of the index	F_{it} =	Free float factor of company i to be applied to each security, expressed as a number between zero to 1, where 1 represents 100% free float
P_{it} =	Last traded price of company i at day t	C_{it} =	Capping factor of company i , expressed as a number between zero and 1
S_{it} =	Number of outstanding shares of company i at day t capitalization	b =	Base free float-adjusted market capitalization
DY_{it} =	Dividend yield of company i		

Methodology

Listing History	Company must be listed for at least 12 months during the review period; at least 6 months for REITs
Free Float	Company's free float shares must be at least 20% of its outstanding shares at the end of the 12-month period in review
Liquidity	Company must rank among the top 25% in terms of median daily trade per month in nine out of the 12-month period in review.
Dividend	Companies with common stocks who have regularly issued cash dividends for the past three consecutive years
Weighting	At the start of each rebalancing period, the constituent weight is capped so the highest weight in the index is no more than 10%
Financial Criteria	Relevant financial criteria are evaluated to ensure that index constituents are fundamentally sound
Final Selection	The 20 companies with the largest three-year average dividend yields and passed the free float and liquidity requirements are to be included in the PSE Dividend Yield Index.
