

PSE MidCap Index

The PSE MidCap Index is designed to capture the performance of mid-sized companies of the Philippine market. The constituents are selected based on specific liquidity and market capitalization criteria.

Base Value	1,000.00	Computation Method	Free float market capitalization
Base Date	30 December 2010	Review Dates	February and August
Calculation Frequency	End of day	Currency	Philippine Pesos (Php)

Index Performance

Sources: PSE Data and Bloomberg

Index Calculation

$$PSE\ MidCap\ Index_t = \frac{\sum_{i=1}^n (P_{it} \times S_{it} \times F_{it})}{b} \times PSE\ MidCap\ Index_{t-1}$$

$$i = 1, 2, 3, \dots, n$$

Where:

n =	Number of constituents of the index	F_{it} =	Free float factor of company i to be applied to each security, expressed as a number between zero to 1, where 1 represents 100% free float
P_{it} =	Last traded price of company i at day t		
S_{it} =	Number of outstanding shares of company i at day t capitalization	b =	Base free float-adjusted market capitalization

Methodology

Listing History	Company must be listed for at least 12 months during the review period
Free Float	Company's free float shares must be at least 20% of its outstanding shares at the end of the 12-month period in review
Liquidity	Company must rank among the top 35% in terms of median daily trade per month in nine out of the 12-month period in review
Market Capitalization	Company's MCAP is among the top 95% of the cumulative MCAP of eligible companies
Financial Criteria	Relevant financial criteria are evaluated to ensure that index constituents are fundamentally sound
Final Selection	The 20 largest companies based on full market capitalization, excluding constituents of PSEi, are to be included in the PSE MidCap Index
